# Biography

Renzo has collaborated with companies throughout the electronics supply chain for the past 22 years. From material suppliers to device and equipment makers, Renzo has advised clients on the commercial impact of new technologies and emerging markets within the electronics industry.

Projects have spanned across a variety of sectors, from consumer-related markets to the defense industrial base. Renzo has experience in several technology sectors including semiconductors, passives, interconnects, and MEMs devices. He has developed subject matter expertise in:

- 5G RF infrastructure
- AI server hardware and processor assembly
- Optical interconnects and modules
- Automotive LiDAR, radar, and vision systems
- RF front end modules
- Advanced manufacturing and assembly processes
- III-V SiC and GaN
- Power electronics and power semiconductor integration
- Thermal management components
- IC fabrication
- Automotive electronics
- Advanced high data rate electrical interconnects

## Why RCD Strategic Advisors?

**RCD Strategic Advisors** works with organizations to solve complex business issues related to technology in electronics hardware and its supply chain. We help clients understand and capitalize on economic, technological, and structural changes that affect their business.

Part of RCD Advisors' mission is to make sense of strategically important markets. The firm brings strong technical competence and business acumen combined with over twenty years of consulting experience into your team. This approach enables us to provide deeper and customized research for our clients. We are experts in several domains, but operate across all segments and technology areas within the electronics hardware industry. This broad exposure allows us to draw linkages across different silos and provide creative insights for our clients.
